Vidmate android phone app

We see a lot of cool apps in the Android realm - apps that take advantage of the flexible nature of the platform to do what innovations you won't find in other mobile operating systems. The app, launched yesterday by developer Chris Lacy (the man behind Action Launcher), has the potential to change the way you use your phone or tablet. In short, it acts as a companion to your regular mobile browser by cleverly managing all the links you open from within other apps. Let's say you're in the Google+ app and you tap the Normally, your device will kick you out of Google + load Chrome, then load the page while you view and wait (I use Google+ for this example, but the same thing can be said for Facebook, Twitter customers, or almost every app you open an external link), with Link Bubble, the page will start loading in the background as soon as you tap the link, and then it will be pulled up in the window when it's ready for you to see. No waiting, no interrupted workflow and no time wasted. You can collapse the page and move the link bubble circle anywhere on your screen if you want to save it later, and if you want to save a link to a service like Pocket or share it to other apps on your device, you can tap the circle and drag it to the appropriate shortcut. You can do this before the page is finished loading if you wish. You can tap multiple links and let them load with Link Bubble as well, then do what you're doing and see the pages in the window overlay on them. One of the great benefits of Link Bubble is that it also reduces jumping back and forth, which sometimes happens when you tap a link within an app, such as when you tap a YouTube or Google Play link on Twitter and watch it open first in your browser and then ping to the right destination. Link the bubbles across that special step and just take you directly to where you want to go. You'll almost have to see it in action to appreciate the full extent of how it works. Take a look at this demo video: To be clear, Link Bubble is not intended to replace your regular browser. You won't open Link Bubble to start a new browsing session, for example, it just jumps in to handle open links from within other apps in a more elegant way. In order to take advantage of all the features, you'll need to pony up five bucks for the license code. Pro I recommend giving it a spin related reading: • 8 great apps you'll find only on Android • Android Power 3 Favorites for February 2014 • How to Custom Gmail notifications on copyrighted Android devices © Communication IDG 2014, Inc., our Android experts have combed the Google Play Store for the best Android apps, put them through them and selected only truly exclusive apps. We test apps from across the Play Store, including camera apps and photo editors. Health & fitness apps to improve your quality of life, as well as security tools and customizations to help customize your phone to suit you. There are so many Android apps in the Play Store, it can be difficult to know which one is best. Comments may be helpful, but they can also be subject to management and editors choosing only the surface. An Android app that will revolutionize functions, or at the very least, something so great that it becomes one of the must-download apps whenever you get a new mobile phone. The following apps are constantly updated and a mixture of paid and free apps selected by our Android experts, so even if you dip into real cash for one of these apps, you can be safe in the knowledge it is a worthwhile purchase. We also arrange into categories so you can find what you're looking for more easily. Click through to the following pages for those or check out the new best Android app below. This is the best Android phone in the world, this new Android app is the latest Android app that we choose to offer refresh every few weeks. Our options are usually new apps or apps that have just been updated with important information. But sometimes hidden gems and other important things are also highlighted (photo credit: Wait, But Why & Kurzgesagt), the universe in Nutshell\$2.99/£3.29Universe in Nutshell is an interesting educational app that shows the relative size of so many things in the universe. You can tap on any of their data for more information, but you can also pinch to zoom in or out and see something much bigger or smaller. Zoom out and you will whiz past creatures, objects that humans do, countries, moons, planets, stars and more until you reach the universe, all observable is the biggest thing included. Zoom in and you finally go down to the smallest particles and all these things can tap for more information. The colorful cartoon presentation makes the universe in Nutshell look like it is designed for kids and they will certainly enjoy exploring, but it is fascinating for adults. Best Android Camera App and Favorite Android Photo Editor for Photo, Sorting and Editing Photos and Videos (Photo Credit: TechRadar) Glitch LabFree + \$6.49/£5.99 IAPGlitch Lab is a photo editor full of digital crash effects. You've probably seen apps like this before. The pattern of the effect on offer will not appeal to everyone. But if you like making your photos look quaint or retro, this is one of the most versatile and versatile ways to do it. There are more than 100 effects in this Android app, and many can be customized to make sure your bugs don't look like others, as if demonstrating the power it is possible to create images from scratch, create them through a lot of effects and customizations. There are plenty here, even for free, but to get the most out of Glitch Lab, you'll have to grab this IAP Pro for \$6.49/£5.99, at the time of writing, adding 42 extra effects, 37 extra effects. (Photo credit: Aidan Wolfe) DoodleLens \$1.99/£1.89DoodleLens may be a little gimmicky, but it's fun, just doodle something and then point your phone camera at the doodle from within the app and you can copy and paste it to the top of the world around you in augmented reality. You can also change the color of the doodle and even create very basic animations by copying multiple doodles and having an app cycle through them. It's one of the many tools that hope to replace your phone's default camera app. Camera apps are very different and their success largely depends on your phone's model and model, but Pixtica is a great option if you're looking for something new. It is packed with many features, including many filters, GIF recorders, panoramas, hyperlapse, manual and strange controls, such as the 'Planet' mode, which warps the image into a spherical shape using it. Pixtica's advanced stereo projection algorithm has all sorts of other modes as well, whether you take a photo or take a video, and the app is arranged in a way. However, while many functions are free, you have to pay to unlock higher resolutions and remove watermarks when using filters. Payments make you get other things as well, but those things are important to make the purchase close to where necessary if you plan to use Pixtica, and that would be nice, except for the app choosing a subscription fee (from \$1.25/£1.25 for one month with a discount for six months or a year). Instead of being able to use it as a single use purchase, you can use it as a single purchase. We're not fans of subscription payments for camera apps, but if such an app is worth it, it's Pixtica.ScribbleFree + \$5.49/£5.49Scribble is a photo editor that lets you add animations to your photos. We refer to light paths in general, but there are many ways they can move in many colors that you can choose, and you can choose where it appears on the image and the larger size. Basically, it's an app that does one thing but does it. Well, once you've added an animation, you can save the results to your phone's gallery and be ready for sharing. The basic app is free, but for a used-to-send fee or monthly subscription, you can remove ads and unlock additional customization options, as well as unlock the ability to remove scribble watermarks from your creations. If you like this app, it's worth paying, but you can taste it without anything. Photo WatermarkFree + \$0.99/£0.89 monthly subscription Photo. Watermarks do what the name suggests - it allows you to add watermarks to photos - but the types of watermarks you can add are quite varied. Not only can you add custom text as a watermark (including changing fonts, sizes and colors). You can also use your signature (or other hand-written text) as a watermark by writing on the screen. You can also use time stamp stickers, position, mosaic effects or 'graffiti' (which generally allows you to go wild in your pictures with a digital paint brush). Whether you want to protect your photos or just save the time and place taken, there should be a tool here to suit the photo watermark for free, but it's quite heavy in ads. But if you don't add a watermark to a lot of pictures, it may not be worth it. StoryZ Photo Motion & CinemagraphFree + \$1.99/£1.79 Monthly SubscriptionStoryZ Photo Motion & Cinemagraph is an Android photo editing app in two parts. This can be an effective way to make it look like water or smoke is moving, or just add a slight stumbling effect to what you expect to be constant. The 'Motion' mode, which allows you to combine video with photos, gives you some fixed 'images' and some movements. In both cases, it can be difficult to make the effect look credible. But it can be done based on evidence from all the impressive public submissions shared in the app. StoryZ also offers a contest with a specific theme, such as 'Ladder' or 'Sand', which you can enter by submitting a related creation. You can use StoryZ for free, but if you find you more gifted than we think, there is also StoryZ Premium, which for a monthly subscription removes ads and watermarks, increases the allowed length of the video in motion mode, improves the set of tools in Ripple mode, and allows you to record and share with high definition KineMaster KineMasterFree + £2.91 (about \$3.70). This app lets you add audio and image filters to videos, add text, stickers and other overlays. Changing and trimming videos one frame at a time, adjusting the speed Effects, changes and much more. You can also record videos directly from the KineMaster app, it can feel a little cramped on the phone screen, but otherwise everything will work fine. You can use the KineMaster Android app for free, but all your videos will have a KineMaster watermark and you can't use it commercially. To remove the watermark, allow it to be commercialized and unlock additional assets (such as effects and overlays). You have to pay a subscription fee, but at £2.91 (about \$3.70) a month it's still affordable. Interval - Camera Pro \$1.99/£1.79A Truly great camera app needs to avoid clutter and full of manual controls so you can capture it exactly as you like. But that's a tough balance to strike and manage less. Interval - Camerarguably Pro do though. Shutter Speed ISO White Balance Exposure compensation and focus There are also several different versions of the tap-to-focus, grid timer and lens. It's an impressive set of tools with apps focused on more powerful utilities than gimmicky filters, but it all has a very clean and simple look, and it's designed with ease of use in mind. You can double-tap any settings to return to auto, or double-tap the viewfinder to rotate everything back to auto, and all controls are within easy reach. The main downside of this Android app is that it can't shoot videos nowadays, but for photos there's a good chance you'll want to replace your current camera app with this, and the video is obvious in photoDirectorFree + phone option subscriptions may have a powerful camera, but chances are it doesn't come with much photo editing tools. Fortunately, PhotoDirector is an Android app that can fill the gap. This app lets you adjust the saturation tone of the white light and the color of the photos you previously taken, as well as adding filters and effects, which you can adjust the strength and apply to all or part of the photo. You can also add text, stickers, frames, change the view, reflection, crop, and much more. PhotoDirector is easy to use and you can always undo your changes, so you're safe to experiment. And that's just the fix part of the app. There's also a built-in camera, which lets you take new photos with various effects and see live through the viewfinder how they will affect the image, most PhotoDirector is free, but if you want to go straight to your best, there's a premium version that costs £2.59 (about US\$3.70) per month with a discount if you're done for three months or a year. This unlocks additional tools, improves output quality and removes ads. LightXFree Photo Editor + \$3.69/£3.49 IAP If you want an all-in-one photo editor for Android, then LightX Photo Editor is a great option, not least because most features are free. You can merge images, add effects and filters, select colors with the region of Adjust the color balance, smooth and sharp images, crop, rotate them, draw on them, add frames and stickers, add text, create collages, and much more. Mostly as a manual description, but also a video tutorial for if you're stuck, and for IAP \$3.69/£3.49, you can get rid of ads, unlock additional stickers and frames, and add the ability to save images in PNG SKRWT format. Change the lens ratio and distortion correctly instead. You can also flip, rotate the mirror and crop the image, but the SKRWT is not very interested in modifying the photos in an unnatural manner, as well as making them look exactly as you imagined when you were shooting. It's a professional tool, but it's easy to use and you can undo your changes if you don't like it. These are the best photo editing apps you can download right now.
